Server

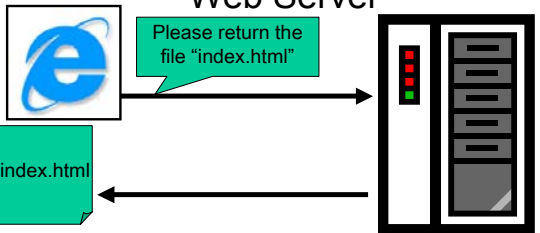

A server is a computer that offers services. Those services can be accessed remotely by other computers, which are called clients.

Dr. Martin Hepp 4

Web Server

Please return the file "index.html"

A web server stores web pages. Those pages can be requested by any remote computer.

Dr. Martin Hepp 5

Sending eMail: SMTP

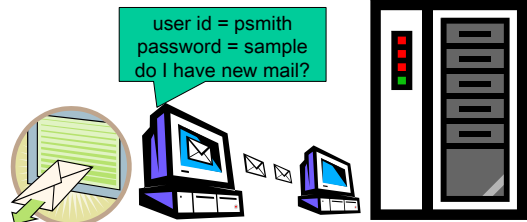

The diagram illustrates the SMTP process. On the left, a green speech bubble contains the text: "user id = psmith", "password = sample", and "1 message following". Below this, a computer monitor displays an email icon, and a smaller computer to its right shows a list of emails. Arrows indicate the flow of data from the user's computer to a server rack on the right, which has a red light on top.

Receiving eMail: POP3

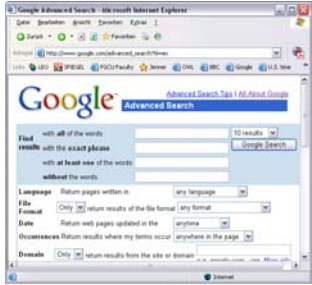

The diagram illustrates the POP3 process. On the left, a green speech bubble contains the text: "user id = psmith", "password = sample", and "do I have new mail?". Below this, a computer monitor displays an email icon, and a smaller computer to its right shows a list of emails. Arrows indicate the flow of data from the server rack on the right to the user's computer. The server rack has a red light on top.

Internet Search Options

The screenshot shows the Google Advanced Search interface in a web browser. The search bar is at the top, followed by the "Advanced Search" link. Below are various filters: "with all of the words", "with at least one of the words", "without the words", "Language", "File", "Date", and "Domain". Each filter has a dropdown menu and a "Only" checkbox.
