Information Systems ISM 3011

Fall 2004
Unit 2A

Dr. Martin Hepp

1

Vision. Value. You.

Assignment for Next Class

- Read and prepare the case studies 1, 2, and 3.

Dr. Martin Hepp

2

Vision. Value. You.

Put In Nonsense, Get Out Chaos

- Accurate data is crucial.
- False or ambiguous data propagates and puts the integrity of the whole Information System at risk.
- This is an even bigger danger when multiple systems work together and exchange data.

Dr. Martin Hepp

3

Vision. Value. You.

System and Modeling Concepts

Dr. Martin Hepp

4

Vision. Value. You.

System

- A set of elements or components that interact to accomplish goals
- Input
- Processing mechanism
- Output
- Feedback
- System boundary

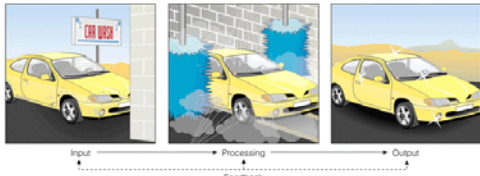

Dr. Martin Hepp

5

Vision. Value. You.

Components of a System

FIGURE 1-3
Components of a System
A system's four components consist of input, processing, output, and feedback.

Dr. Martin Hepp

6

Vision. Value. You.

System	Elements			Goal
	Inputs	Processing mechanisms	Outputs	
 Coffee Shop	Coffee beans, tea bags, water, sugar, cream, spices, pastries, other ingredients, labor, management	Brewing equipment	Coffee, tea, pastries, other beverages and food items	Quickly prepared delicious coffee, tea, and various food items
 College	Students, professors, administrators, textbooks, equipment	Teaching, research, service	Educated students; meaningful research; service to community, state, and nation	Acquisition of knowledge

FIGURE 1-4
Examples of Systems and Their Elements

Dr. Martin Hepp 7

Vision. Value. You.

System Performance and Standards

- Efficiency: output/input
- Effectiveness: extent to which system attains its goals
- Performance standard: specific objective of a system

Dr. Martin Hepp 8

Vision. Value. You.

System Variables and System Parameters

- System variable - item controlled by decision-maker
- System parameter - value that cannot be controlled

Dr. Martin Hepp 9

Vision. Value. You.

Systems Classification

TABLE 1-3
Systems Classifications and Their Primary Characteristics

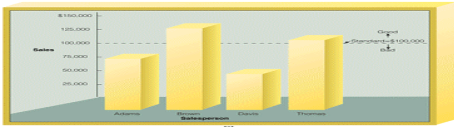

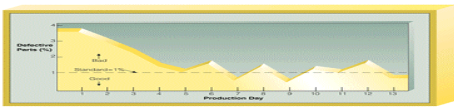

Simple	Complex
Has few components, and the relationship or interaction between elements is uncomplicated and straightforward	Has many elements that are highly related and interconnected
Open	Closed
Interacts with its environment	Has no interaction with the environment
Stable	Dynamic
Undergoes very little change over time	Undergoes rapid and constant change over time
Adaptive	Nonadaptive
Is able to change in response to changes in the environment	Is not able to change in response to changes in the environment
Permanent	Temporary
Exists for a relatively long period of time	Exists for only a relatively short period of time

Dr. Martin Hepp 10

Vision. Value. You.

System Performance and Standards

FIGURE 1-5
System Performance Standards

Dr. Martin Hepp 11

Vision. Value. You.

Modeling a System

- A model is an abstraction that is used to represent reality
 - 4 major types of models
 - A narrative model is based on words
 - Logical, not physical
 - A physical model is tangible
 - A schematic model is a graphic representation
 - Graphs and charts
 - A mathematical model is an arithmetic representation

Dr. Martin Hepp 12

 Vision. Value. You.

Why makes it sense to use models instead of reality?

- Reality is complex. It is easier to **understand the functionality** of a system once it has been reduced to its essential structure.
- Automation implies that we **treat a set of individuals or items equally**. That means, we must find a form of representation which is suited for each.

Dr. Martin Hepp 13

 Vision. Value. You.

Modeling a System

Models should be validated!

Dr. Martin Hepp 14

 Vision. Value. You.

What Is An Information System?

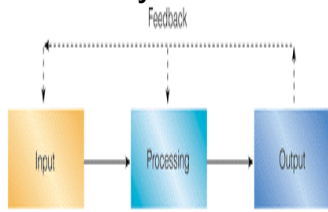

Dr. Martin Hepp 15

 Vision. Value. You.

Components of an Information System

FIGURE 1-7

The Components of an Information System
Feedback is critical to the successful operation of a system.

Vision. Value. You.

“...changing the way organizations conduct business.”

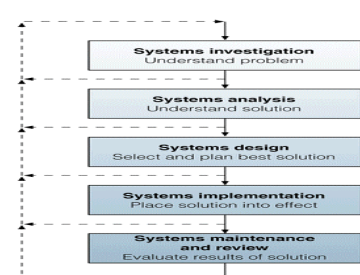

What do you think is the better approach:

- Write an individual program that exactly represents a company's current processes?
- Change the company's processes to those already available in standard software?
- First reengineer all processes and then write respective software.

Dr. Martin Hepp 19

Vision. Value. You.

Systems Development

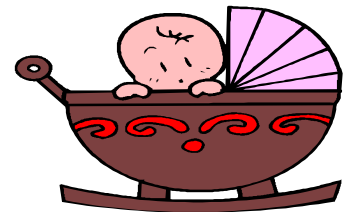

```

graph TD
    A[Systems investigation  
Understand problem] --> B[Systems analysis  
Understand solution]
    B --> C[Systems design  
Select and plan best solution]
    C --> D[Systems implementation  
Place solution into effect]
    D --> E[Systems maintenance and review  
Evaluate results of solution]
    E --> A
    
```

Information Systems in Organizations

Principles of Information Systems Sixth Edition - Chapter 2

Dr. Martin Hepp 22

Vision. Value. You.

Organizations & Information Systems

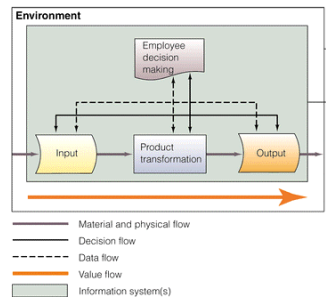

FIGURE 2-1
A General Model of an Organization
Information systems support and work within all parts of an organizational process. Although not shown in this simple model, input to the process subsystem can come from internal and external sources. Just prior to entering the subsystem, data is external. Once it enters the subsystem, it becomes internal. Likewise, goods and services can be output to either internal or external systems.

Dr. Martin Hepp 23

Vision. Value. You.

Value Chain

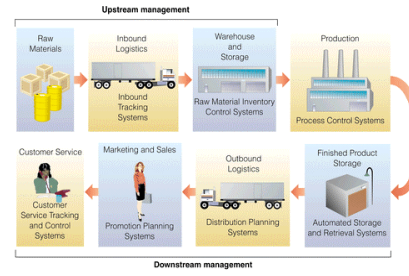

FIGURE 2-2
The Value Chain of a Manufacturing Company
The management of raw materials, inbound logistics, and warehouse and storage facilities is called upstream management, and the management of finished product storage, outbound logistics, marketing and sales, and customer service is called downstream management.

Dr. Martin Hepp 24

Vision. Value. You.

Organizational Structure

- Organizational subunits and their relationship with the overall organization
- Categories of organizational structure:
 - Team
 - Traditional
 - Multidimensional
 - Project
 - Virtual

Dr. Martin Hepp 25

Vision. Value. You.

Traditional Organizational Structure

FIGURE 2.3
A simplified model of the organization, showing the managerial general from top-level managers to nonmanagement employees.

Dr. Martin Hepp 26

Vision. Value. You.

Example of a Traditional Structure

FIGURE 2.4
A Traditional Organizational Structure

Dr. Martin Hepp 27

Vision. Value. You.

Project Organizational Structure

- Centered on major products and services
- Temporary project teams

Dr. Martin Hepp 28

Vision. Value. You.

Project Organizational Structure

FIGURE 2.5
A Project Organizational Structure

Dr. Martin Hepp 29

Vision. Value. You.

Team Organizational Structure

- Temporary or permanent teams
- Work groups
- Various sizes

Dr. Martin Hepp 30

Vision. Value. You.

Multidimensional Organizational Structure

- May incorporate several structures at the same time
- Advantage:
 - ability to simultaneously stress both traditional corporate areas and important product lines
- Disadvantage:
 - multiple lines of authority

Dr. Martin Hepp 31

Vision. Value. You.

Multidimensional Organizational Structure

FIGURE 2.6
A Multidimensional Organizational Structure
Employees in each group may have two bosses—a project boss and a functional boss.

Dr. Martin Hepp 32

Vision. Value. You.

Virtual Organizational Structure

- Employs business units in geographically dispersed areas
- People may never meet face to face
- Can be permanent or temporary

Dr. Martin Hepp 33

Vision. Value. You.

Organizational Culture

- Shared understandings, values, and assumptions in an organization
- Influences information systems

Dr. Martin Hepp 34

Vision. Value. You.

Organizational Change

FIGURE 2.7
A Change Model

Dr. Martin Hepp 35

Vision. Value. You.

Reengineering

FIGURE 2.8
Reengineering
Reengineering involves the radical redesign of business processes, organizational structure, information systems, and values of the organization to achieve a breakthrough in business results.

Dr. Martin Hepp 36

 Vision. Value. You.

Reengineering

Rule	Original Rationale	Potential Problem
Small orders must be held until full-truckload shipments can be assembled.	Reduce delivery costs.	Customer delivery is slowed—lost sales.
No order can be accepted until customer credit is approved.	Reduce potential for bad debt.	Customer service is poor—lost sales.
All merchandising decisions are made at headquarters.	Reduce number of items carried in inventory.	Customers perceive organization has limited product selection—lost sales.

TABLE 2.0¹
Selected Business Rules That Affect Business Processes

Dr. Martin Hepp 37

 Vision. Value. You.

Continuous Improvement

- Constantly seeking ways to improve business processes
- Benefits:
 - Increased customer loyalty
 - Reduction in customer dissatisfaction
 - Reduced opportunity for competitive inroads

Dr. Martin Hepp 38

 Vision. Value. You.

Continuous Improvement vs. Reengineering

Business Process Reengineering	Continuous Improvement
Strong action taken to solve serious problem	Routine action taken to make minor improvements
Top-down driven by senior executives	Worker driven
Broad in scope; cuts across departments	Narrow in scope; focus is on tasks in a given area
Goal is to achieve a major breakthrough	Goal is continuous, gradual improvements
Often led by outsiders	Usually led by workers close to the business
Information system integral to the solution	Information systems provide data to guide improvement team

TABLE 2.0²
Comparing Business Process Reengineering and Continuous Improvement

Dr. Martin Hepp 39

 Vision. Value. You.

“...changing the way organizations conduct business.”

What do you think is the better approach:

- Write an individual program that exactly represents a company's current processes?
- Change the company's processes to those already available in standard software?
- First reengineer all processes and then write respective software.

Dr. Martin Hepp 40

 Vision. Value. You.

Technology Diffusion, Infusion, and Acceptance

- Technology diffusion - measure of widespread use of technology
- Technology infusion - extent to which technology permeates a department

Dr. Martin Hepp 41

 Vision. Value. You.

Total Quality Management (TQM)

- Quality: ability of a product or service to meet or exceed customer expectations
- TQM: approaches and techniques used to achieve quality throughout the organization
