## Information Systems ISM 3011

Fall 2004  
Unit 4A

Dr. Martin Hepp

1

 Vision. Value. You.

## Assignment for Next Class

- Read chapter 5
- Self-Assessment test chapter 5
- Check that you know the key terms listed on p. 218
- Prepare review questions Chapter 5: 1, 4, 5, 8, 11

Dr. Martin Hepp

2

 Vision. Value. You.

## Flextronics /QuoteWin

- Review the case (see p. 131)
- What is the problem with QuoteWin from a **supplier's** perspective?

Dr. Martin Hepp

3

 Vision. Value. You.

## An Overview of Software

- **Computer program** - sequences of instructions for the computer
- **Documentation** - describes program functions
- **Systems software** - coordinates the activities of hardware & programs
- **Applications software** - helps users solve particular problems

Dr. Martin Hepp

4

 Vision. Value. You.

## The Importance of Software in Business

**FIGURE 4-1**  
*The Importance of Software in Business*  
Since the 1950s, businesses have greatly increased their expenditures on software as compared with hardware.

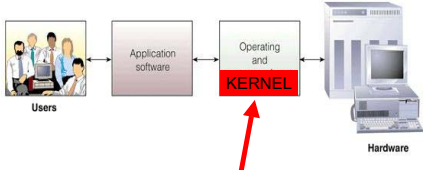

Dr. Martin Hepp

5

 Vision. Value. You.

## The Role of the Operating System

**FIGURE 4-2**  
*The role of the operating system and other systems software is as an interface or buffer between application software and hardware.*

Dr. Martin Hepp

6

Vision. Value. You.

## Hardware Independence

**FIGURE 4-3**  
Application Program Interface  
Links Application Software to the  
Operating System

**Examples:**

- Accessing **Printers** (Windows-API) or
- **Scanners** and Digital Cameras (TWAIN)

Dr. Martin Hepp 7

Vision. Value. You.

## Memory Management

**FIGURE 4-4**  
An Example of the Operating System Controlling Physical Access to Data

The user prompts the application software for specific data. The operating system translates this prompt into instructions for the hardware, which finds the data the user requested. Having successfully completed this task, the operating system then relays the data back to the user via the application software.

**Find and reserve free blocks etc.**

1	2	3	4	5	6
Memory segments					

Dr. Martin Hepp 8

Vision. Value. You.

## Processing Tasks

- **Multitasking** - more than one program (task) can run at a time using a single processor
- **Multi-User OS** - multiple users can simultaneously use the resources of a single processor
- **Scalability** - easy adaptation to more users or tasks

Dr. Martin Hepp 9

Vision. Value. You.

## System Speed and RAM

- Why does a bigger primary storage capacity (more RAM) increase your PC's speed?
- Does more memory always lead to a higher system performance?

Dr. Martin Hepp 10

Vision. Value. You.

## Off-the-Shelf Software

- The book says on page 147 that one should check whether the software manufacturer is financially solvent and reliable. Why?

Dr. Martin Hepp 11

Vision. Value. You.

## Sources of Software

**FIGURE 4-5**  
Sources of Software: Proprietary and Off-the-Shelf  
Some off-the-shelf software may be modified to allow some customization.

Dr. Martin Hepp 12

Vision. Value. You.

## Proprietary vs. Off-the-Shelf Software

Proprietary Software		Off-the-Shelf Software	
<b>Advantages</b> You can get exactly what you need in terms of features, reports, and so on.  Being involved in the development offers a further level of control over the results.  There is more flexibility in making modifications that may be required to contract a new initiative by one of your competitors or to meet new supplier and/or customer requirements. A merger with another firm or an acquisition also will necessitate software changes to meet new business needs.	<b>Disadvantages</b> It can take a long time and significant resources to develop required features.  In-house system development staff may become hard pressed to provide the required level of ongoing support and maintenance because of pressure to get on to other new projects.  There is more risk concerning the features and performance of the software that has yet to be developed.	<b>Advantages</b> The initial cost is lower since the software firm is able to spread the development costs over a large number of customers.  There is a lower risk that the software will fail to meet the basic business needs—you can analyze existing features and the performance of the package.  Package is likely to be of high quality since many customer firms have tested the software and helped identify many of its bugs.	<b>Disadvantages</b> An organization might have to pay for features that are not required and never used.  The software may lack important features, thus requiring future modification or customization. This can be very expensive because users must adopt future releases of the software as well.  Software may not match current work processes and data standards.

Dr. Martin Hepp 13

Vision. Value. You.

## What is **Integrated** Software?

- **Data Integration:** "One fact at one place"
- **Functionality Integration:** one function can interact with others (copy and paste inside one program)
- **Application Integration:** Two or more software applications can interact.
- **Process Integration:** Two or more business processes are connected.

Dr. Martin Hepp 14

Vision. Value. You.

## Compiler

**FIGURE 4-16**  
**How a Compiler Works**  
 A compiler translates a complete program into a complete set of binary instructions (Stage 1). Once this is done, the CPU can execute the converted program in its entirety (Stage 2).

Dr. Martin Hepp 15

Vision. Value. You.

## Object-Oriented Programming Languages

- **Objects** - data and actions that can be performed on the data
- **Encapsulation** - group items into an object
- **Polymorphism** - one procedure can work with multiple objects
- **Inheritance** - an object in a particular class gets attributes of that class

Dr. Martin Hepp 16

Vision. Value. You.

## Object-Oriented Programming Languages

Dr. Martin Hepp 17

# Information Systems

## ISM 3011

Fall 2004  
Unit 4B

Dr. Martin Hepp19

  
Vision. Value. You.

## Case 1: Offshore Outsourcing

### Question 1

- Reason 1:
  - Savings due to lower wages (cost of hiring programmers 1/7)
- Reason 2:
  - Shortage of U.S. programmers
- Reason 3:
  - Work can be done around the clock (-> time-zone differences)

Dr. Martin Hepp20

  
Vision. Value. You.

## Case 1: Offshore Outsourcing

### Question 2

- Lack of Control
  - Need for strong project management, budget and quality control
- Communications
  - Language, cultural, and social barriers
  - U.S. everyday tasks and requirements must be specified in detail (SSN format,...)

Dr. Martin Hepp21

  
Vision. Value. You.

## Case 1: Offshore Outsourcing

### Question 3

- Knowledge must be revealed
  - internal procedures etc.
- Possible Project Failure
  - The results cannot be used as planned.
  - Serious Delays
- Loss of Skills

Dr. Martin Hepp22

  
Vision. Value. You.

## Case 1: Offshore Outsourcing

### Question 4

- Send U.S. Project Management Team to Offshore Site
- Establish Short Feedback Cycles
  - Compile prototype daily

Dr. Martin Hepp23

  
Vision. Value. You.

## Case 2: Crystal Flash, ASP

### Question 1

- Crystal Flash Can Focus on Its Competitive Advantages.
- Free Human Resources

Dr. Martin Hepp24

 Vision. Value. You.

### Case 2: Crystal Flash, ASP Question 2

- Flexibility
  - Crystal Flash can define its own sales processes.
- Less Paperwork
  - Sales staff saves time
- Real-time Information/Reports

Dr. Martin Hepp 25

 Vision. Value. You.

### Case 2: Crystal Flash, ASP Question 3

- Check [www.salesnet.com](http://www.salesnet.com)

Dr. Martin Hepp 26

 Vision. Value. You.

### Case 2: Crystal Flash, ASP Question 4

- Customer Data, Sales Processes, etc. Contain Extremely Sensitive Information
  - Nobody else should have access
- Sales Processes Tolerate No Outages
  - Internet outages, technical problems, and the risk of bankruptcy are serious dangers.

**Summary: Sales Processes Are Not Suited for Outsourcing/ASP**  
(please feel free to disagree: [mhepp@computer.org](mailto:mhepp@computer.org) ☺)

Dr. Martin Hepp 27

 Vision. Value. You.

### Case 3: Microsoft Question 1

- Think of lost work, missed deadlines, nightshifts, unsatisfying grades,...

...Always make and keep backup copies of important work,  
at least once a day, in the very final stage several times a day.

Dr. Martin Hepp 28

 Vision. Value. You.

### Case 3: Microsoft Question 2

- Bug-fixes Can Be Delivered Easily Via The Internet
  - Compare that to product recalls in the automotive industry...
- Market Share Is Extremely Important for Success in the Software Industry

Dr. Martin Hepp 29

 Vision. Value. You.

### Case 3: Microsoft Question 3

- Long History of Bugs in MS Software
- Programming Style and Company Culture
- Focus on Innovation and Speed
- Consumer Software: Trade-off between Quality and Price

Dr. Martin Hepp 30

  
Vision. Value. You.

## Case 3: Microsoft Question 4

- Change Release Procedures
- Modify Software Architecture

Dr. Martin Hepp 31

  
Vision. Value. You.

## Assignment for Next Class

- Read chapter 5
- Self-Assessment test chapter 5
- Check that you know the key terms listed on p. 218
- Prepare review questions Chapter 5: 1, 4, 5, 8, 11

Dr. Martin Hepp 32

  
Vision. Value. You.

## Thank you!
